

# Hanakamjuvet

••••• Merka turstig

Fram til 1860-åra frakta dei malmen frå Gullnes på kløvhestar langs denne smale ridevegen som ligg på nordsida av Hanakamjuvet. I 1866 kom den nye vegen på motsatt side av juvet.

*Old horse road from the mines of Gullnes. Until the 1860's this small road was used to carry ironminerals, transported by horses. They loaded the mineral from the mines at Gullnes on the back of a horse and transported it down to the senter of Seljord. The new road opposite of the river was built in 1866.*
